

**Certification of Substances Department**

**Certificate of suitability  
No. R1-CEP 2011-328-Rev 02**

1 *Name of the substance:*  
2 **METFORMIN HYDROCHLORIDE**  
  
3 *Name of holder:*  
4 **EXEMED PHARMACEUTICALS**  
5 Block No. 628 (A & B), ECP Canal Road  
6 Village Luna, Taluka Padra  
7 India-391 440 Vadodara, Gujarat

8 *Site(s) of production:*  
9 **SEE ANNEX 1**

10 **THIS CERTIFICATE SUPERSEDES THE PREVIOUS CERTIFICATE**  
11 **R1-CEP 2011-328-REV 01**

12 After examination of the information provided on the manufacturing method and subsequent  
13 processes (including purification) for this substance on the site(s) of production listed in annex, we  
14 certify that the quality of the substance is suitably controlled by the current version of the  
15 monograph **METFORMIN HYDROCHLORIDE** no. 931 of the European Pharmacopoeia, current  
16 edition including supplements, only if it is supplemented by the test(s) mentioned below, based on  
17 the analytical procedure(s) given in annex.

18 – Test for residual solvents by gas chromatography (Annex 2)  
19 Methanol not more than 3000 ppm  
20 Xylene not more than 2170 ppm

21 In the last steps of the synthesis water is used as solvent.

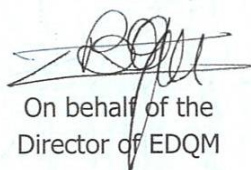

22 A risk management summary for elemental impurities has been provided. (Annex 3)

23 The re-test period of the substance is 5 years if stored in double polyethylene bags, placed in  
24 either a cardboard box or a fibre drum or a polyethylene drum.

25 The holder of the certificate has declared the absence of use of material of human or animal  
26 origin in the manufacture of the substance.

27 The submitted dossier must be updated after any significant change that may alter the quality,  
28 safety or efficacy of the substance.

- 29 Manufacture of the substance shall take place in accordance with the Good Manufacturing Practice  
30 and in accordance with the dossier submitted.
- 31 Failure to comply with these provisions will render this certificate void.
- 32 This certificate is renewed from **5 April 2018** according to the provisions of Resolution AP-CSP  
33 (07) 1, and of Directive 2001/83/EC and Directive 2001/82/EC and any subsequent amendment,  
34 and the related guidelines.
- 35 This certificate has three annexes, the first of 1 page, the second of 7 pages and the third of  
36 2 pages.
- 37 This certificate has:  
38 lines.

  
On behalf of the  
Director of EDQM

Strasbourg, 18 November 2019

DECLARATION OF ACCESS *(to be filled in by the certificate holder under their own responsibility)*

**EXEMED PHARMACEUTICALS**, as holder of the certificate of suitability

**R1-CEP 2011-328-Rev 02 for Metformin Hydrochloride**

hereby authorises .....  
*(name of the pharmaceutical company)*

to use the above-mentioned certificate of suitability in support of their application(s) for the following  
Marketing Authorisation(s): *(name of product(s) and marketing number(s), if known)*

The holder also certifies that no significant changes to the operations as described in the CEP dossier  
have been made since the granting of this version of the certificate.

Date and Signature *(of the CEP holder)*:

**Certification of Substances Department**

**Annex 1 : Site(s) of production for R1-CEP 2011-328-Rev 02**

**Production of Metformin Hydrochloride:**

EXEMED PHARMACEUTICALS

Block No. 628 (A & B), ECP Canal Road

Village Luna, Taluka Padra

India-391 440 Vadodara, Gujarat

**MODULE-3 QUALITY**

**METFORMIN HYDROCHLORIDE PH. EUR.**

**Residual Solvents:**

**Reagents:**

Methanol (AR Grade)

Xylene (AR Grade)

1-Methyl 2-pyrrolidinone (Diluent) (AR Grade)

**Chromatographic conditions:**

Column: Fused silica capillary column DB-1, (30m x 0.32 mm, 1  $\mu$ m)

**Instrument parameters:**

Make: Shimadzu GC2010 with Teledyne HT3 HS

**Diluent:** 1-methyl-2-pyrrolidone used as a diluent.

**Blank:** Transfer 1 ml of diluent in headspace vial seals the vial using butyl rubber septa (Make single preparation).

**Preparation of composite stock standard solution "S":** Transferred about 25 ml of diluent into a 100 ml volumetric flask and tarred to zero. Weigh accurately about 300 mg of methanol standard and 217 mg of Xylene standard into the same 100 ml volumetric flask. Diluted to the volume with diluent and mix well. Designated this preparation as composite stock standard solution "S" contained about 3000 ppm of methanol and 2170 ppm of xylene.

**Preparation of composite standard solution "S<sub>1</sub>":** Transferred accurately 5.0 ml of above composite stock standard solution "S" into a 50 ml volumetric flask. Diluted to the volume with diluent and mix well. Designated this preparation as composite standard solution "S<sub>1</sub>" contained about 300 ppm of methanol and 217 ppm of xylene. Transfer accurately 1.0 ml of composite standard solution into a 20 ml head space vial. Applied Stoppard and capped to it.

**Preparation of Test solution:** Weigh accurately and transfer about 100 mg of metformin hydrochloride API into a 20 ml head space vial a head space vial. Added accurately 1.0 ml of diluent to it and mixed well. Applied Stoppard and capped to it. (Make two preparations separately)

## MODULE-3 QUALITY

### METFORMIN HYDROCHLORIDE PH. EUR.

**Procedure:** Place headspace vials of blank followed by composite standard solution in 6 vials separately and test preparation in duplicates on headspace magazine and run the GC and head space under above chromatographic conditions. Note down the area peaks of solvents in the chromatograms. Integrate the peaks of solvent in the sample and standard chromatogram.

#### Order of injections:

| Sr. No. | Name of solution             | No. of injections | Remarks                                 |
|---------|------------------------------|-------------------|---|
| 1.      | Diluent as a Blank           | 1                 | Identification of blank peaks in sample |
| 2.      | Composite Standard solution  | 6                 | For system suitability and calculation  |
| 3.      | Test solution per one batch  | 2                 | Determination of solvent conc.          |
| 4.      | Bracketing standard solution | 1                 | For system suitability                  |

RSD  $\leq$  10.0%

**Note:** i) If more than 5 batches, one injection of Composite Standard solution shall be injected after every 5 batches (or 10 injections of test samples). Check RSD of areas of first six replicate injections of Standard solution and one after i.e. 7 standards is less than 10.0%.

ii) Individual residual solvents values from two different preparations should comply with the specifications. Calculate the mean value and report the same.

#### System suitability criteria:

- The relative standard deviation (% of RSD) for six replicate injections of composite standard preparation ( peak area for each solvent ) should be less than or equal to 10.0%
- The resolution between first peak of Xylene & second peak of Xylene should not be less than 1.2 in composite standard preparation.

#### Calculation:

Calculate amount in ppm of each residual solvent in individual vial by using the following formula and report the average.

## MODULE-3 QUALITY

### METFORMIN HYDROCHLORIDE *PH. EUR.*

#### For Xylene:

$$\text{Xylene } [\mu\text{g/g}] \text{ or ppm} = \frac{R_u}{R_s} \times \frac{W_{\text{std}}}{100} \times \frac{5}{50} \times \frac{1}{W_{\text{spl}}} \times \frac{P}{100} \times 10^6$$

Where,

$R_u$  = Sum of peak areas of Xylene in the test solution chromatogram.

$R_s$  = Sum of peak area of Xylene in standard solution chromatogram.

$W_{\text{std}}$  = Weight of Xylene standard in mg.

$W_{\text{spl}}$  = Weight of sample in mg.

$P$  = Purity of Xylene solvent (as is basis)

#### For Methanol:

$$\text{Methanol } [\mu\text{g/g}] \text{ or ppm} = \frac{R_u}{R_s} \times \frac{W_{\text{std}}}{100} \times \frac{5}{50} \times \frac{1}{W_{\text{spl}}} \times \frac{P}{100} \times 10^6$$

Where,

$R_u$  = Peak area of Methanol in the test solution chromatogram.

$R_s$  = Peak area of Methanol in standard solution chromatogram.

$W_{\text{std}}$  = Weight of Methanol standard in mg.

$W_{\text{spl}}$  = Weight of sample in mg.

$P$  = Purity of Methanol solvent (as is basis)

Calculate the amount of Methanol in individual vial and report the average.

**LOD level:** Xylene = 44 ppm, Methanol = 60 ppm

**LOQ level:** Xylene = 88 ppm, Methanol = 121 ppm

**Note:** Report results as a "BLQ" if obtained results are below LOQ level and as "BLD" if obtained results are below LOD level.

**MODULE-3 QUALITY****METFORMIN HYDROCHLORIDE PH. EUR.****Elemental Impurities**

The Intended route of administration for Metformin Hydrochloride is Oral, However we have considered stringent approach and tested drug substance with a stringent limit (Parenteral).
